

SoloLearn: Learn to Code (anything!)

Partner: SoloLearn, Inc

Country: US | Armenia

Established: 2013

Employees: 10

Website: www.sololearn.com

The Idea

With coding transformed into a “must-have” skill, SoloLearn aims to create an enjoyable environment for infinite professional growth. Diversity of learning experiences and topics paired with peer-to-peer interaction gradually upgrade your skills, building your trustworthy coder reputation, needed to advance your career today - be it in programming, data science, sales, finance, or management.

The Results

15M users worldwide have used SoloLearn to learn a new programming language since its launch. Today, SoloLearn is a community of over 4M registered users (800K+ monthly and 100K+ daily active users), majority from US, India, and Europe, that learn and build their coder profile in the most interactive way. No paid marketing, the growth has primarily been achieved due to word of mouth.

The Solution

SoloLearn is the world’s largest mobile community of young code learners where users build their reputation through unlocking lessons, practicing in the Code Playground, participating in threaded Q&A forums, and competing in head-to-head games. Eleven programming tracks are offered by SoloLearn today, the most popular being C++, Python, C#, and web development. Tens of thousands of new content pieces, generated by the community every day, make the learning experience fun and up-to-date.

The Azure Benefit

Our whole backend is running on Azure, providing a flexible and scalable solution for all of our services.
